The Fundamental Principles of Accounting

At the heart of Reece's teachings are the fundamental principles that underpin all accounting practices. These principles ensure consistency, accuracy, and comparability of financial information across businesses and industries.

- Accrual Principle

The accrual principle states that income and expenses should be recognized when they are incurred, not necessarily when cash is received or paid. This approach provides a more accurate picture of a company's financial position.

- Consistency Principle

Businesses should apply the same accounting methods from period to period unless a change is justified and disclosed. This ensures comparability of financial statements over time.

- Going Concern Assumption

Financial statements are prepared under the assumption that the business will continue to operate indefinitely, unless there is evidence to the contrary.

- Matching Principle

Expenses should be matched with the revenues they help to generate within the same accounting period. This principle ensures that income statements reflect true profitability.

- Conservatism Principle

When faced with uncertainty, accountants should choose the solution that results in less optimistic financial statements, thereby avoiding overstating assets or income.

- Preparing Adjusted Trial Balance

- Financial Statement Preparation
- Closing Entries

- Debits and Credits
 - Debits increase asset and expense accounts.
 - Credits increase liability, equity, and revenue accounts.
 - Proper understanding of debits and credits is essential for accurate recording.
- Bank Reconciliation

A process to ensure that the company's accounting records match bank statements, identifying discrepancies and preventing fraud.
