- What does this component do?
- Why is it important?
- How does it contribute to the vehicle's overall function?

3. Analyzing Interactions Between Components

Next, students analyze how parts work together:

- How do the wheels and axles interact to produce movement?
- How do connectors maintain stability?
- What happens if a component is altered or removed?

This step emphasizes understanding system dynamics.

4. Testing and Observation

Students conduct experiments, such as:

- Pushing the vehicle to observe mobility.
- Removing or modifying parts to assess impact.

- Testing different configurations if parts are interchangeable.

Record findings meticulously for analysis.

5. Drawing Conclusions and Recommendations

Finally, students synthesize their observations:

- Determine which components are critical for function.
