What is Tan Delta?

Tan delta (loss tangent) is a ratio representing the dielectric losses in an insulating material relative to its stored energy. Mathematically, it is expressed as:

$$\tan \delta = \frac{\text{Losses (Resistive component)}}{\text{Stored Energy (Reactive component)}}$$

In the context of transformer insulation, tan delta quantifies the dielectric dissipation factor,

indicating the level of insulation deterioration, moisture ingress, or partial discharges.

Why is Tan Delta Testing Important?
