- **Types of Levers:** First, second, and third class, differentiated by the position of the fulcrum, effort, and load.

- **Examples:** Seesaws, crowbars, scissors.

2. Inclined Plane

An inclined plane is a flat surface set at an angle to help raise objects with less effort.

- **Function:** It allows objects to be moved upward with less force over a longer distance.

- **Examples:** Ramps, slides, sloped roads.

3. Wheel and Axle

This simple machine consists of a wheel attached to a rigid axle, allowing rotational movement.

- **Function:** It amplifies force when turning or moving objects.

- Third-class lever: Effort is between load and fulcrum (e.g., broom, fishing rod)

Advantages

- Simple to operate and construct
- Can multiply force or distance
- Widely used in tools and machinery

- Wheel and Axle

Overview and Functionality

This machine consists of a large wheel attached to a smaller wheel or axle. When the wheel turns, it turns the axle, or vice versa, allowing for the transfer of force and motion.

Applications

- Car tires and steering wheels
- Doorknobs
- Gear systems

Benefits

- Reduces friction and effort when moving or turning objects
- Facilitates smooth rotation and movement
